

CLIMBING HOLDS & VOLUMES CATALOGUE

2020-2021

Dear EP partners,

We are very proud to introduce you our 2021 new products. **This year is a real refresh wave for EP holds & volumes.** Indeed, we managed to upgrade most of our existing ranges and created new ones. More than ever, we are keen to **bring climbing to everyone.** To fit with actual route setting tendencies, each of our shapers created a unique universe and declined it in smaller to bigger shapes.

First, **Shauna's range tripled its size**, following the line of geometric shapes. Like last year, the idea is to be able to create fundamental to big moves, from beginners to athletes, extending climbing possibilities one side to another. **With Shauna's super efficient rails, route setters will definitely be on track!**

Second, we expanded our shaper's network with new incomers : **The Bleaujob Team.** Pierre & Yann are Fontainebleau's hard climbers and great route setters. Also sea lovers, they inspired themselves from the waves for their first range, named Atami. **From XS to giga waves, this range will rock the boat!**

Third, we'd like to tell you more about **Simon, our Swiss knife.** Simon has been our dedicated shaper for more than 3 years now, enhancing the Absolute range with very original prehensions. He has been able to refresh EP's line and to keep the prehensions affordable to the greatest number, both at the same time. In the same spirit, he now launches his own universe: **Simon's range. The range that will give route setters more than one blade to their knife!**

Simon also upgraded our **Kids' range** with 5 new sets. **Each set represents a prehension:** Easy faces are jugs, Intermediates are slopers, Challenge are edges, Smileys are pinches and Joysticks are.. joysticks. All of them in an easy prehension way of course. The idea here is to **sensitize our youngest climbers at the earliest** with all kind of existing prehension. **Take care, they may redpoint routes before us!**

Our wood volumes range, the **Pharao Range, also extended** and gave birth to **4 new Pharaos:** Isis, Gizeh, Hathor and Seth. The two first are very small, they may **most likely be used as holds.** The two seconds are definitely big and are conceived for being used all together to **create a crack**, for example. **May they give you the strength to top the highest mounts!**

And last but not least, our **fiberglass macros** range has been growing so fast, that we had to create a new universe just for them. The Yin Yang dual texture wok made its effect last year. This is turn for **Ufo and Orb: 6 oval shapes** that do not derogate to the rule: same universe, declined in several prehensions. Will you challenge the most fleeting Orb? **Next Unidentified Flying Object may you!**

We definitely hope you'll enjoy route setting and climbing our brand new collection. **More are coming, stay tuned!**

The whole EP Team.

TECHNICAL INFORMATION

THE MATERIALS

We use two materials for our climbing holds:

- **POLYURETHANE:** This material is both light and resistant to impact forces. We offer a different choice of colours: bright fluorescent ('fluor') ones.
- **POLYESTER:** This is the traditional resin used for climbing holds. The touch is dry and the holds are resistant to abrasion.

THE HOLDS COLOURS

We offer a vast selection of colours, depending on the material:

PU POLYURETHANE

Blue (RAL 5015) Blue (RAL 3020) Yellow (PANTONE 116C)

Fluo Pink (PANTONE 806C) Fluo Orange (PANTONE 805C) Fluo Green (PANTONE 802C)

Purple (RAL 4008) Green (PANTONE 2427C) Black (RAL 9005)

PE POLYESTER

Blue (RAL 5015) Blue (RAL 3020) Yellow (PANTONE 116C)

Fluo Pink (PANTONE 806C) Fluo Orange (PANTONE 805C) Fluo Green (PANTONE 802C)

Purple (RAL 4008) Green (RAL 6002) Black (RAL 9005) Grey (RAL 7001)

QUALITY AND CERTIFICATIONS

EPS - EXPLOSION PROOF SYSTEM

The EPS system is a patented technology developed by ENTRE-PRISES. If a bolt-on hold should develop a crack or break across the fixing hole, the hold will remain in place connected together by the metal EPS component and the pieces will not fall. This system is implemented on all large volume PE holds.

EN 12572-3: HOLDS CERTIFICATION

All Entre-Prises holds comply with the European standard for climbing holds. Rigorous tests are randomly carried out on the sets of holds.

EN 1176-1: PLAYGROUND CERTIFICATION

Entre-Prises offers a large range of holds that are certified to comply with the European standard for playgrounds. They can be used by children older than 2 years.

MAINTENANCE

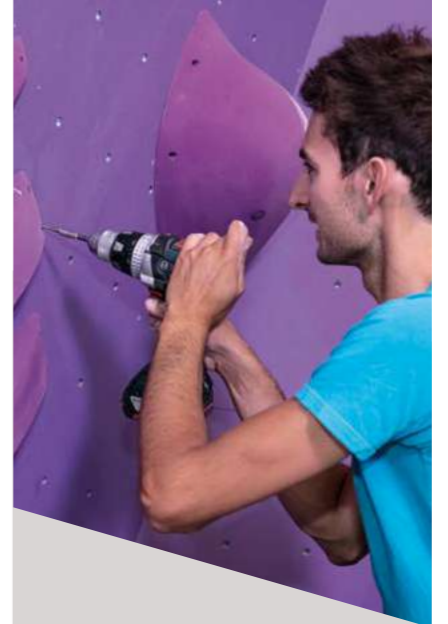

The climbing holds must be cleaned regularly. Simply wash with warm water and a stiff brush. Do not use any solvent detergent that could weaken the hold. A damaged climbing hold cannot be repaired.

FIXINGS

Here are most of the fixing tools we can provide you and their recommended use.

To help you choose the right screws, you can refer to the "recommended screws" section that is specified in each product description. Please note that this is not exhaustive information and screw size may vary depending on the thickness of your wall.

REF.	NAME	RECOMMENDED USE
BOLTS & SCREWS		
EQ877	CHC bolts M10*35	Full thread - For indoor bolt-on holds

TOOLINGS		
EQ098	Allen key M6	To be used for FHC installation
EQ889	Allen key M8	To be used for CHC installation
EQ097	Allen key M6 FACOM in T shape	To be used for FHC installation
EQ102	Expansion anchor H10	To be used for anchoring pins installation
EQ821	Allen key for tamper-proof screws	To be used for FHC tamper-proof bolts installation

OUR INSTALLATION RECOMMENDATIONS

To ensure user safety, the climbing holds require special attention during assembly:

- We recommend the use of a torque wrench set to a maximum of 35 N-M.
- The surface must be flat, unbroken and clean.
- It is essential to use the holes provided for the anti-rotation screws.

Most of our holds are equipped with a dual fixing system that allows the use of different bolts:

- CHC M10 bolts (cylindrical-type)
- FHC M10 bolts (counter-sunk-type)

DIFFICULTY OF THE ROUTE

To help you in selecting holds, we offer a rating scale for each set.

This is indicative of the complexity of the hold.

THE SIZE OF THE HOLDS

It depends on their average diameter:

- XS** 0 to 5 cm
- S** 5 to 8 cm
- M** 8 to 11 cm
- L** 11 to 16 cm
- XL** 16 to 22 cm
- XXL** 22 to 30 cm
- A** Mix

HOW TO CHOOSE HOLDS?

The choice of climbing holds is an important step for the life of your climbing wall.

HERE ARE A FEW TIPS:

OUTDOOR OR INDOOR USE

For outdoor use, we recommend PolyEster holds if the surface is flat. If the surface is curved, PolyUrethane will be better, but we advise avoiding the «fluo» colours. The «Kids» range is ideal for playgrounds.

BOULDERING OR LEAD CLIMBING

Most holds can be used for both disciplines. However, the pure shapes (Absolute, Macros) are often preferred for bouldering as they focus on moves. The sculpted holds (Essential, Yangshuo, Stone Pulse) offer a large selection of grips, an important criteria when considering the line of a lead route.

QUANTITY

- For bouldering: use between 5 and 15 holds for a boulder 4.5 meters high.
- For lead: use 3 to 4 holds per meter for a route, so a classic 12-meters high wall has around 40 holds: 25 hand holds and 15 foot holds. Also, in order not to saturate your wall, we recommend to keep up a maximum of 2 or 3 routes per climbing line.

IMPROVING THE WALL WITH VOLUMES

Climbing is becoming more fun and dynamic.

- For bouldering: volumes completely modify the profile of a wall, and offer new climbing possibilities. We would recommend using between 2 and 5 macros per boulder.
- For lead: the volumes are a way to change the rhythm of a route by providing a point of rest, or a steeper line. 2-3 macros per route is a good starting point.

- PE** PolyEster
- WOOD** Wood
- FB** Fibreglass

Rating scale

- SoftTouch Grain
- Wood screws only
- Playground Certified

When setting out to create my first ever range of holds I had one central idea in mind; to make a range that could be used to set fun, creative problems for climbers of all abilities.

Everything has been designed with the climber in mind. All the edges are rounded and comfortable so they feel good in your hands and the texture of each hold feels nice on your skin. The simple geometric shapes lend themselves to all styles of climbing from fundamental climbing movements right up to elite level climbs of all styles. I really wanted the holds to work on lots of different styles. Also some of the holds across the range interconnect to generate endless possibilities of hold configurations.

I am so excited to see what routesetters do with these holds and hopefully climbers will get as much fun climbing on these holds as I had creating them!

Parisian duo, Bleaujob is route setting in all its facets. From competition to climbing gyms, we were keen to offer a range that would be accessible to as many people as possible.

The shapes are more voluminous and allow 3D climbing, something to play with from beginner to expert.

Atami (wave in Japanese), shopped under «la dent de Crolles», Rhône Alpes, offers a whole range of outstanding shapes.

Shaper for EP for more than 3 years. Simon continues to expand the Absolute range and is now developing his own range and bringing a wave of originality.

«Shape is a subtle balance between ergonomics and design. inspiration comes from the desire for a technical and comfortable grip. Simple and pure shapes, reflecting a modern climbing style. Forget the superficial, concentrate on the essential. Imagined by the mind, sculpted for reality. For free climbing, for the beauty of movement, for pleasure.»

The “Absolute” holds have been specially designed for bouldering. This sleek range has been designed to focus on creating specific types of move: one hold, one grip.

These holds are all made of Polyurethane: this allows them to be light and shockproof, as well as increasing their lifespan.

For more precision, most “Absolute” holds can be fixed with bolts or wooden screws. It is also possible to attach small holds to larger holds using wooden screws. The holds are classified by type of grip, then by size.

NEW

The "Essential" holds are principally used for climbing walls. With simple shapes, they create a good foundation for any climbing wall, whatever the desired difficulty.

All of the holds in this range are made of PolyEster: they are resistant to abrasion and can be used outdoors.

The holds are classified by type of grip, then by size.

 **ESSENTIAL**
The essentials for equipping a wall

Essential Feet XS 2

This range of packs offers sets of different sizes and various holds. According to the type of pack, the holds can be used for bouldering or climbing walls. They allow easy route-setting at a lower cost.

All of the holds in this range are made of PolyEster: they are resistant to abrasion and can be used outdoors.

Their adaptability is perfect for communities and intensive use.

Granite offers a natural look and exceptional shape. Available in various shapes, this series allows you to play with the grip feeling: the texture of the holds was worked by our shapers in such a way as to reproduce the feel of granite.

The grips are subtle and require precision in order to improve your climbing ability.

All of the holds in this range are made of PolyEster: they are resistant to abrasion and can be used outdoors.

The ENTRE-PRISES "Kids" range of soft and ergonomic grips are adapted for the hands of children! These holds can be used to route-set paths on a climbing wall, or build many fun traverses.

As they are certified for playgrounds, they guarantee safety for children.

The PolyEster holds are resistant to abrasion, especially sneaker use, and can be used outdoors.

Practice and training enable climbers to grow and develop.

For this, we offer fun, new, compact hangboards made with the revolutionary texture "SoftTouch", specially developed to protect your skin while training.

Campus rungs and wooden balls allow you to progress by introducing new grips and various moves. These tools allow you to work, among others, the strength of your fingers, forearms and biceps.

ENTRE-PRISES offers you a complete range of volumes. They will allow you to create new moves and rethink the geometry of your walls in a simple and effective manner.

The "Pharao" range is a set of plywood volumes that come in different geometric shapes. They can be easily assembled together to create more complex shapes.

The bolt-on holds can be fixed on the surfaces of the volumes as there are numerous threaded inserts. In addition, the resin volumes offer organic shapes perfect for bouldering.

Fibreglass Macros have always been present in ENTRE-PRISES Range. Iconic shapes such as Wok, Taijitu and Bubble have become a must-have standard.

From local gyms to world Championships, Route-setters are always finding new ways of using them! This is why they are also part of IFSC official sport equipment catalogue.

This year, the Wok is now upgraded in Dual Texture creating a Yin Yang for trendy routes with better visual aspect!
